SPECIAL ADVISORY

⚠ **Temperature Drop**

Irrigation management: Maintain adequate soil moisture during fruit development to support fruit enlargement and prevent moisture-stress-related fruit drop. Irrigate moderately when the soil becomes dry, considering the limited rainfall forecast. Avoid over-irrigation. Nutrient management: Apply fertilizer according to the recommended dose and soil condition and ensure balanced nutrient supply. Avoid excessive nitrogen application. Cold protection: With minimum temperature expected to drop to 3.3°C, protect young and newly planted citrus trees with any protective covers during cold nights. Remove covers during the day. Maintain orchard sanitation by removing fallen, diseased and rotten fruits. Monitor trees for any abnormal fruit drop, pest or disease incidence. Refer NCHM weather forecast and be informed.
